Aims and Scope

Neuroanatomy is a journal in English, and publishes original research articles dealing with neuroanatomical sciences in animals (vertebrates and invertebrates) and humans. Papers in any of the following fields will be considered: molecular, cellular, histological and gross anatomical studies on normal and/or abnormal experimental animals and humans. Functional, morphological, biochemical, physiological and behavioral studies are considered if they include neuroanatomical analysis. Reports on techniques applicable to the above fields are also considered. Occasional reviews on subjects selected by the Editors will be published. Miscellaneous items, including essays, book reviews and commentaries may also be published on approval of the Editorial Board.

Editorial Correspondence

All material for publication should be sent to *Associate Professor M. Mustafa Aldur, MD, PhD, Department of Anatomy, Hacettepe University, Faculty of Medicine, 06100, Ankara, Turkey; e-mail: editor@neuroanatomy.org*. For detailed instructions concerning the submission of manuscripts, please refer to the Instructions to Authors at the back of the journal or visit the journal web site (<http://www.neuroanatomy.org>).

Subscription Rates

Both the electronic and the printed versions of *Neuroanatomy* are *FREE*. The printed version of journal (pISSN 1303-1783) is published annually. The readers and/or organizations who order the printed version will be charged *9 US Dollars* for the shipment expenses for an original copy. The credit card form which must be filled and signed for mailing expenses can be found in the web site of the journal. The electronic version of journal (eISSN 1303-1775) is absolutely *FREE* and can be accessed on internet (<http://www.neuroanatomy.org>).

Copyright and Photocopying

© 2002 neuroanatomy.org. No authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is required by the publisher. This consent does not extend to other kinds of copying such as copying for general distribution, for advertising or promotional purposes, for creating new collective works or for resale. Special requests should be addressed to the publisher (mustafa@aldur.net). pISSN 1303-1783 and eISSN 1303-1775

Disclaimer

The Owner, Publisher and Editors cannot be held responsible for errors or any consequences arising from the use of information contained in this journal; the views and opinions expressed do not necessarily reflect those of the Owner, Publisher and Editors, neither does the publication of advertisements constitute any endorsement by the Owner, Publisher and Editors of the products advertised. The all responsibilities of the contents of the articles belong to the authors.

Journal Online

Neuroanatomy is also available online via NEUROANATOMY.ORG. Full-text online articles can be accessed from this internet address. Keep up to date with the latest tables of contents, emailed directly to your desktop, by registering for free at: <http://www.neuroanatomy.org/pages/form.html>.

Instructions to Authors

The Neuroanatomy annually publishes original articles related to the central and peripheral nervous system morphology and structure. The content of the Neuroanatomy is determined by the Editors.

Categories the Neuroanatomy will consider for publication include review articles, main papers, case reports and anatomical variations, technical reports, and letters to the Editor.

Submitted manuscripts must not contain previously published material or material under consideration for publication elsewhere. Accepted manuscripts become the property of the Neuroanatomy and may not be republished.

All manuscripts will undergo peer review in which an evaluation by a minimum of two referees is undertaken without their knowledge of the manuscript's authors or affiliations.

An expeditious review and a subsequent decision relative to publication will then be made by a Neuroanatomy Editor.

Manuscripts and all correspondence should be addressed to:

M. Mustafa Aldur, MD, PhD
Hacettepe University
Faculty of Medicine
Department of Anatomy
06100, Ankara, TURKEY
editor@neuroanatomy.org

Author Responsibilities

By submitting a manuscript for publication, each author acknowledges having made a substantial contribution in the conception and design of the study, the analysis and interpretation of the results, and the writing of the paper, and has approved the final submitted version of the paper. Each author thus also acknowledges responsibility for the integrity of the manuscript, assures the originality of the manuscript, and guarantees that duplicate or redundant publications or submissions have not occurred. The Editors reserve the right to request the original data obtained in the investigation.

Authors are responsible for all statements made in the text.

Manuscript Submission

These instructions are based in part on recommendations in the Uniform Requirements for Manuscripts Submitted to Biomedical Journal [Ann. Intern. Med. 1997(126)36-47]. Variations from guidelines in this publication reflect the individual style of the Neuroanatomy.

When sending material for publication the authors must:

Submit the original and one copy of all elements. Please also submit an electronic version of text (as a MS WORD document) on a 3^{1/2} inch PC or Mac compatible diskette. The manuscript should be typed double-spaced throughout on one side of heavy-bodied A4 paper (210 x 297 mm) with at least a 2.5 cm margin on all sides. Number all manuscript pages consecutively, beginning with the title page.

Prepare a cover letter and a copyright transfer form signed by all authors.

Preserve anonymity by ensuring that the authors' names appear only on the title page and by eliminating references to institutions, affiliations, and to previous work by the authors.

Organize the manuscript as follows: title page, blind title page (title only), abstract, introduction, methods, results, discussion, conclusion, acknowledgments, references, figure legends, and tables.

Keep acronyms and abbreviations to a minimum. When an abbreviation is used, define it at first mention and follow with the abbreviation in parentheses.

Categories of Submission

Review Articles

The author(s) is absolutely free to design the paper. There is no limitation in the page count in this category. References, figures, and legends follow the guidelines described below under 'Main Papers.' The Abstract section is needed.

Main Papers

Title Page. The following information should appear: title of article; authors' name, and last name; affiliations, grant support, and presentation in part or whole at any meeting. Identify the corresponding author and provide full mailing address, phone and fax numbers, and e-mail address.

Abstract. The abstract is limited to 250 words, and should describe the essential aspects of the investigation. In the first sentence state the background; in the second sentence state your specific purpose or hypothesis; in the third, fourth and fifth sentences summarize methods, results and conclusion. No references should be cited.

Introduction. Include brief background information on what has been done in the past in this area and the importance of your investigation. End with a statement of the purpose or hypothesis of the study.

Methods. This section may be divided into subsections if it facilitates reading the paper. The research design, subjects, material used, and statistical methods should be included. Do not mix results and discussion

into this section. Do not include manufacturer's names unless the specific product is important to the procedures performed, in which case the city and state or country of the manufacturer should also be given. Indicate that informed consent has been obtained from patients who participated in clinical investigations. In animal experimentation, acknowledge that National Institutes of Health or equivalent guidelines were followed. When appropriate, indicate that approval was obtained from the institution's review board. If there is a sponsoring company, include at the end of this section what input that company had in the formulation of the paper.

Results. This section may be divided into subsections if it facilitates reading the paper. Present results in a clear, orderly fashion and include statistical results to substantiate the results. All results based on methods must be included. If tables and graphic material will ease the understanding of the results, include them; however, when the results can be summarized easily in a narrative form, do not use tables. Cite figures to illustrate findings.

Discussion. Start with limited, pertinent background information and then discuss the results of the investigation in light of what has been published in the past, the limitations of your study, and potential directions for future research. Where appropriate, cite figures and graphs.

Conclusion. In a separate section, summarize the major findings of the study and their clinical usefulness (if applicable). This paragraph should address the hypothesis or purpose stated earlier in the paper.

Acknowledgments. Acknowledgments should appear on a separate page. Obtaining permission to include a name in this section from the individual being acknowledged is advised.

References. Section must be double spaced and begin on a separate page. References are numbered consecutively in the order in which they appear in the text. All references must be cited in the text, where numbers are enclosed in parentheses on line with the text (not superscript). Data such as abstracts from meetings should be cited in the reference list. For meeting abstracts, cite the authors, title, society meeting, date, and location. Citations of personal communications should appear in the 'Discussion' section only, and should not be used to support the authors' conclusions. Papers submitted but not yet accepted for publication should also be cited in the text (Konan A, unpublished data, 1998). Inclusive page numbers (eg, 441-442) must be provided for all references. Journal names are abbreviated per Index Medicus. All authors should be listed in references.

Style and punctuation of references follow the format illustrated in the following examples:

Journal article: Aldur MM, Celik HH, Sargon MF, Dagdeviren A, Aksit MD, Taner D. Unreported anatomical variation of septum pellucidum. Clin. Anat. 1997 (10) 245-249.

Book: Noback CR, Demarest RJ. The Human Nervous System. 2nd ed., New York, McGraw-Hill. 1975; 199-201.

Chapter in an edited book: Wyngaarden JB. Principles of human genetics. In: Wyngaarden JB, Smith LH, eds. Cecil Textbook of Medicine. 18th ed., Philadelphia, W. B. Saunders Company. 1988; 146-152.

Tables. Each table should be given on a separate page. Each table has a short, descriptive title. Tables are numbered in the order cited in the text. Abbreviations are defined as footnotes at the bottom of each table. Tables should not duplicate data given in the text or figures. The 'Results' section should refer the reader to the appropriate table.

Figures and Legends. The complete sets of original figures must be submitted. Legends should be in the present tense (eg, 'Illustration shows ...'). Excessive illustrative material is to be avoided. Each figure should be labeled top right-hand corner, with the figure number. Subjects' names must not appear on the figures. Labels should contrast well with the background. Images should be uniform in size and magnification. Illustrations should be free of all identifying information relative to the subject and institution. Line drawings should be professional in quality. Written permission for use of all previously published illustrations must be included with submission, and the source should be referenced in the legends. Written permission from any person recognizable in a photo is required. Legends must be double spaced, and figures are numbered in the order cited in the text. Submit color prints only if color is essential in understanding the material presented. Label all pertinent findings.

Case Reports and Technical Reports

While the journal encourages the submission of full-length major papers, it will consider the publication of concise case reports and technical reports. These should be unusually educational and medically important. In addition to a title page (formatted as described above), include a summary (75-word limit) describing the essence of the report, an introduction (two or three sentences of background information); a case report (written in the past tense) or a description of the technique, and a discussion highlighting the educational value of the case or the technique. References should be limited (no more than 10 preferred) to only those that give essential background material. References, figures, and legends follow the guidelines described above under 'Main Papers.'

Letters to the Editor

Letters to the Editor may be used to describe in an extremely brief manner either an observation of interest to our readers, an opinion relative to the Neuroanatomy, or constructive observations or criticisms of published material. Letters should be no more than two pages (double spaced) and should be submitted with a brief title but no salutation. A maximum of four references may be included. Letters are published at the discretion of the journal and are subject to editing.

- 1 Editorial
Aldur MM, Celik HH.
- 2-5 Neuronal tracing
Oztas E.
- 6-8 A simple low-cost method for two dimensional microscopic measuring and stepping on the microscopic plate
Adiguzel E, Duzcan SE, Akdogan I, Tufan AC.
- 9-12 A case of progressive multifocal leukoencephalopathy (PML): diffusion - weighted MR imaging findings
Oguz B, Karli Oguz K, Akpinar E, Cila A, Sain Guven G.
- 13-15 A case of bilateral high division of the sciatic nerves, together with a unilateral unusual course of the tibial nerve
Mas N, Ozeksi P, Ozdemir B, Kapakin S, Sargon MF, Celik HH, Yener N.
- 16-19 Pedicle morphology of the first sacral vertebra
Okutan O, Kaptanoglu E, Solaroglu I, Beskonakli E, Tekdemir I.
- 20-21 Computer aided three dimensional reconstruction course, March 7-8, 2003, Hacettepe University, Ankara, Turkey
Demiryurek D.
- 22-24 Intrasellar arachnoid cyst: a case report
Gok B, Kaptanoglu E, Solaroglu I, Okutan O, Beskonakli E.
- 25-27 Ossification of interclinoid ligament and its clinical significance
Ozdogmus O, Saka E, Tulay C, Gurdal E, Uzun I, Cavdar S.
- 28-34 Microsurgical anatomy of the retroauricular, transcervico mastoid infralabyrinthine approach to jugular foramen
Kanno T, Kiya N, Sunil MV.
- 35-38 Morphometric assessment of brain stem and cerebellar vermis with midsagittal MRI: the gender differences and effects of age
Murshed KA, Ziylan T, Seker M, Cicekcibasi AE, Acikgozoglu S.
- 39-41 Neurovascular branching in the tarsal tunnel
Bilge O, Ozer MA, Govsa F.
- 42 The Limbic Brain by Andrew Lautin
Tascioglu AB.
